LONDON BIKE SHARE

The bike sharing is a transportation service in which an individual can rent a bike for short term. Many system allow people to borrow a bike from dock and return to another dock of same system.

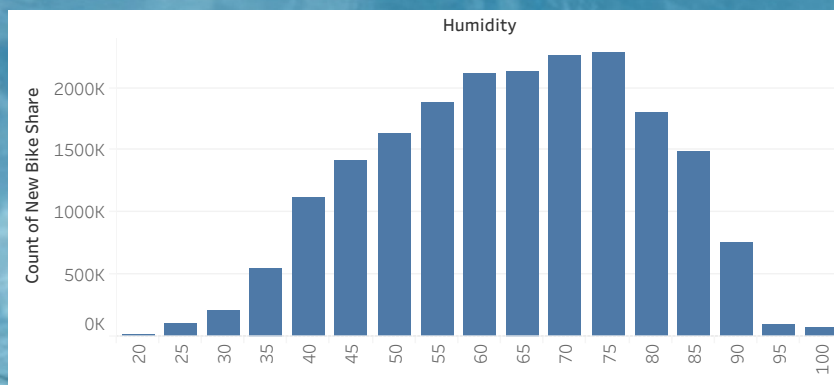

Let us explore how different factors like temperature, wind speed, humidity, season, weather and holiday affect the bike share count.

Presently, there are more than 750 docking stations and 11500 bikes to hire around London.

Let us dive down deep into analysis.

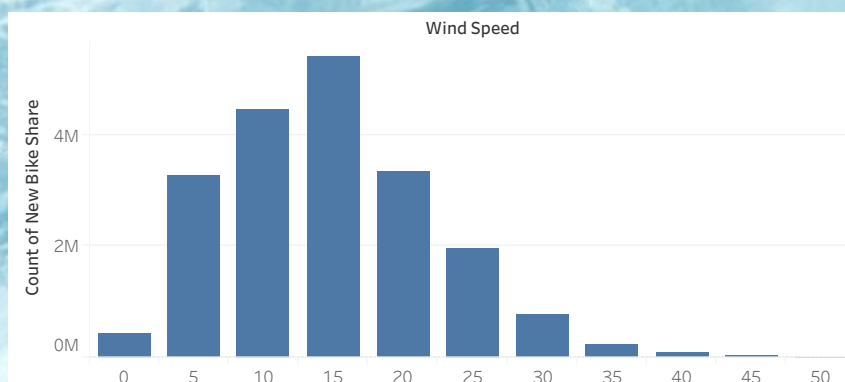

Humidity

- The bike share increase with increase in humidity. At 75% humidity, the bike share count is approx 2M.

- After 75%, it goes down sharply i.e at 100% humidity, the bike share count is only 72K.

Wind Speed

- More than 5M bike share count during wind of 15km/h.

- It tends to go down to as low as 2.1k during wind of 50km/h.

- When there is no wind, bike share count is 0.4M.

Recorded Temperature

- People prefer to ride bike at around 10°C and 15°C, as the bike share count is almost similar at 6M.

- The bike share count is fairly low at -5°C and 30°C, i.e. less than 0.1M.

Temperature Feels Like

- Both the graph are similar in terms of numbers.

- While 15°C still has the highest bike share count but 10°C is considerable lower in count.

Holiday

- Surprisingly, people don't need a holiday to ride bike, 20M people actively riding bike on non-holidays.

Weekend

- Most people like to preserve weekend for long drives or trips. Non-Weekend as usual has more bike sharing count at 15M.

Season

- The beautiful london summers observe the highest bike share at 6M, then fall and spring respectively.

Weather

- Clear sky takes the majority of the new bike share at more than 6M.
- Interestingly, people prefer to ride bike at scattered cloud and Broken cloud more than cloudy.

CORRELATION ANALYSIS

	Count of new bike shares	Temperature	Temperature feels	Humidity	Wind speed	Is holiday	Is weekend	Clear	Cloudy	Spring	Scattered Cloud	Broken Cloud	Fall
Count_of_new_bike	1												
Temperature	0.388798451	1

R Square	0.285257487
Adjusted R Square	0.284764589
Standard Error	917.6931637
Observations	17414

- Correlation co-efficient, multiple R value 0.53 means that the variable are correlated.
- R square value 0.28 suggest that 28% of the data fits the regression model.
- Temperature humidity, wind speed, holiday, spring are lower than 0.05 which means they are statistically significant.

CONCLUSIONS

	Bike Share Maximum	Bike Share Minimum
HUMIDITY	75%	20% and 100%
WIND SPEED	15 km/h	50 km/h
RECORDED TEMPERATURE	15°C	-5°C
FEELS LIKE TEMPERATURE	15°C	30°C
SEASON	Summer	Winter
WEATHER	Clear	Snowfall

INSIGHTS FOR INVESTORS

- Invest more during summer and fall season.
- Heavy maintainance of the bikes should be done during winters and short services during weekends.
- Technically advanced bike should be manufactured for more public involvement during Winters i:e heated seats.
- The bike should have enough mechanical strength, so that the rider feels completely safe.
